

New Civil Engineer

NCE100 | The NCE100 companies in full

12 May, 2016 By NCE Editorial

The NCE100 is a new and exciting way of showcasing the best companies in civil engineering, with firms assessed on the cultures and competencies that matter most.

More from: [NCE100 | Recognising and rewarding outstanding civils firms](#)

NCE100 firms are scored and ordered according to answers provided to comprehensive company and staff surveys. The answers to both surveys are confidential and have only been used to score the companies. The data has also been used to create top 10s in New Civil Engineer's five core themes: Technical Excellence; Future Tech; Engineering Equality; Future Engineer; and World View. NCE100 companies were also invited to enter awards designed to recognise specific achievements within the core themes. The following listing highlights where firms have been recognised for such achievements.

1. Opus International Consultants Winner NCE100 Company Of The Year Award

Opus appears in the top 10 firms across all of the core themes – Engineering Equality (second), Future Engineer (second), World View (fifth), Future Tech (ninth) and Technical Excellence (tenth), which demonstrates a large part of why the firm has been named the NCE100 Company of the Year.

The consultant prides itself on having a clear diversity strategy; engaging its staff in outreach activities to promote the profession and act as STEM ambassadors; working with impact internationally culminating in professional recognition of its work; spearheading new technologies through research and development funding; and pushing engineering boundaries through partnerships with clients.

Its history dates back to colonial New Zealand, when around 1885 the country's public works department began building national road and rail networks to open up its notoriously difficult terrain. It has grown from a small number of engineers to a 3,000 strong staff working in the UK, Australasia, Canada and the US in the key sectors of buildings, transport water and environment. The UK operation was established in 1989. It is now headquartered in Bristol and employs over 400 in 12 offices while the parent company is based in Wellington, New Zealand. It was listed on the New Zealand Stock Exchange in 2007.

Its practice covers asset management and development through the full lifecycle – from concept development, planning, detailed design and procurement to commissioning, operation, maintenance and ultimately rehabilitation and upgrading.

The firm is made up of engineers, scientists, researchers, data analysts, chemists, surveyors and behavioural psychologists who work together. It is perhaps natural that it sums up its ethos as such: 'people, collaboration and innovation'.

- Appears in the top 10 in all areas – Future Tech, Technical Excellence, World View, Engineering Equality and Future Engineer
- Finalist Talent Champion Award
- Finalist Best Place To Work Award
- Highly Commended International Impact Award

Large firm (From 250 to 1,000 staff)
